Good morning,

Included are photos of S092 (near RM 5.8). The core is predominantly classified as very dark gray clayey silt with fine sand by the Pre-RD group. Pre-RD observed "sweet petroleum like odor" from interval 0-2ft, and a rainbow streaks in pan at intervals 2-4ft & 4-5.2ft.

DEQ has requested to be here at the facility during processing activities for S109 and S113 (Gas Co. cores), and will be processed later this afternoon.

Photo 1: interval contents show rainbow streak in pan, observed by Pre-RD

Photo 2: rainbow streak
